SATSs Week
Monday 11th May – Thursday 14th May 2026

As we approach SATs week, we will continue to support and encourage all children to help them feel calm, confident and prepared. We are incredibly proud of the hard work and progress they have made throughout the year, and we will ensure that the week is positive and reassuring for everyone. Children will be reminded to try their best, take their time and believe in themselves, while staff will provide plenty of encouragement, support and opportunities to relax and feel comfortable throughout the assessments.

Year 6

Science –Electricity

During this unit of work, children will consolidate and extend previous learning from year 4 by constructing simple series circuits and drawing them using scientific symbols. They will conduct investigations to determine how the voltage in a circuit affects the brightness of a bulb or the function of other components. They will use their 'working scientifically' skills to plan an experiment to investigate variations in how components function and use the results to write a clear and concise conclusion

PE – OAA

Rounders

In Year 6 rounders, children learn how to bat, bowl, catch and throw safely and accurately. They also develop teamwork, communication and decision-making skills while learning the rules of the game and how to work together during matches.

Maths

We will continue to learning to multiply and divide fractions. This includes multiplying fractions by whole numbers, multiplying fractions by other fractions, and finding fractions of amounts. These skills help children understand how fractions work in different situations, from sharing quantities to solving real-life problems.

In preparation for the Year 6 SATs, children will continue to build their confidence and fluency in maths through regular revision activities in class. This includes weekly arithmetic tests to practise key calculation skills, alongside reasoning papers that help pupils apply their mathematical understanding to a range of problem-solving questions.

Spellings

We will continue to learn a different spelling rule or challenge words each work.

English Writing

This term, children will explore a range of exciting writing units in English. They will begin by studying poetry and experimenting with different poetic techniques such as similes, metaphors, rhyme and expanded noun phrases to create imaginative and expressive poems. Pupils will then move on to researching a famous person and using their findings to write a biography, learning how to organise information clearly using features such as paragraphs, formal language, headings and chronological order. Later in the term, children will write detailed setting descriptions, using ambitious vocabulary, figurative language, varied sentence structures and descriptive techniques to create atmosphere and engage the reader. Across all pieces of writing, Year 6 pupils will focus on key skills including accurate punctuation and spelling, varied sentence types, cohesive devices, and editing and improving their work independently.

Reading Comprehension

We will continue to develop our reading comprehension skills, helping children to become more confident and independent readers. Using a range of class texts and extracts, pupils will practise understanding, interpreting and analysing what they read through skills such as identifying key ideas, making inferences, summarising information and exploring new vocabulary. Children will also use Reading Plus and Lexia to further support and strengthen their reading fluency, comprehension and overall confidence in reading.

PSHE – Conception

In Year 6 PSHE, we will be learning about conception. Conception is taught in a simple, age-appropriate way as part of the statutory Relationships and Sex Education (RSE) curriculum, which is compulsory for primary schools in England.
